1. Tabulated withdrawal design values,  $W$ , for post-frame ring shank nails shall be multiplied by all applicable adjustment factors (see Table 10.3.1).

2. Specific gravity,  $G$ , shall be determined in accordance with Table 11.3.3A.

## 11.3 Reference Lateral Design Values

### 11.3.1 Yield Limit Equations

Reference lateral design values,  $Z$ , for single shear and symmetric double shear connections using dowel-type fasteners shall be the minimum computed yield mode value using equations in Tables 11.3.1A and 11.3.1B (see Figures 11B, 11C, and Appendix I) where:

- the faces of the connected members are in contact;
- the load acts perpendicular to the axis of the dowel;
- edge distances, end distances, and spacing are not less than the requirements in 11.5; and
- for lag screws, wood screws, and nails and spikes, the length of fastener penetration,  $p$ , into the main member of a single shear connection or the side member of a double shear connection is greater than or equal to  $p_{\min}$  (see 11.1).

### 11.3.2 Common Connection Conditions

Reference lateral design values,  $Z$ , for connections with bolts (see Tables 11A through I), lag screws (see Tables 11J and K), wood screws (see Tables 11L and M), nails and spikes (see Tables 11N through R), and post-frame ring shank nails (see Tables 11S and T), are calculated for common connection conditions in accordance with yield mode equations in Tables 11.3.1A and 11.3.1B. Tabulated reference lateral design values,  $Z$ , shall be multiplied by applicable Table footnotes to determine an adjusted lateral design value,  $Z'$ .

**Table 11N COMMON, BOX, or SINKER STEEL WIRE NAILS: Reference Lateral Design Values, Z, for Single Shear (two member) Connections<sup>1,2,3</sup>**

for sawn lumber or SCL with both members of identical specific gravity (tabulated lateral design values are calculated based on an assumed length of nail penetration, p, into the main member equal to 10D)

1. Tabulated lateral design values, Z, shall be multiplied by all applicable adjustment factors (see Table 10.3.1).  
 2. Tabulated lateral design values, Z, are for common, box, or sinker steel wire nails (see Appendix Table L-1) inserted in side grain with nail axis perpendicular to wood fibers; nail penetration, p, into the main member equal to 10D; and nail bending yield strengths, F<sub>b</sub>, of 100,000 psi for 0.099" ≤ D ≤ 0.142", 90,000 psi for 0.142" < D ≤ 0.177", 80,000 psi for 0.177" < D ≤ 0.236", and 70,000 psi for 0.236" < D ≤ 0.273".  
 3. Where the nail or spike penetration, p, is less than 10D but not less than 6D, tabulated lateral design values, Z, shall be multiplied by p/10D or lateral design values shall be calculated using the provisions of 11.3 for the reduced penetration.  
 4. Nail length is insufficient to provide 10D penetration. Tabulated lateral design values, Z, shall be adjusted per footnote 3.

1. Tabulated lateral design values, Z, shall be multiplied by all applicable adjustment factors (see Table 10.3.1).  
 2. Tabulated lateral design values, Z, are for common, box, or sinker steel wire nails (see Appendix Table L4) inserted in side grain with nail axis perpendicular to wood fibers; nail penetration, p, into the main member equal to 10D; dowel bearing strength, F<sub>b</sub>, of 61,850 psi for ASTM A653, Grade 33 steel and nail bending yield strengths, F<sub>y</sub>, of 100,000 psi for 0.099" ≤ D ≤ 0.142", 90,000 psi for 0.142" < D ≤ 0.177", 80,000 psi for 0.177" < D ≤ 0.236", 70,000 psi for 0.236" < D ≤ 0.273"  
 3. Where the nail or spike penetration, p, is less than 10D but not less than 6D, tabulated lateral design values, Z, shall be multiplied by p/10D or lateral design values shall be calculated using the provisions of 11.3 for the reduced penetration.

**Table 11P COMMON, BOX, or SINKER STEEL WIRE NAILS: Reference Lateral Design Values, Z, for Single Shear (two member) Connections<sup>1,2,3</sup>**

for sawn lumber or SCL with ASTM 653, Grade 33 steel side plate  
(tabulated lateral design values are calculated based on an assumed length of nail penetration, p, into the main member equal to 10D)

1. Tabulated lateral design values, Z, shall be multiplied by all applicable adjustment factors (see Table 10.3.1)  
 2. Tabulated lateral design values, Z, are for common, box, or sinker steel wire nails (see Appendix Table L.4) inserted in side grain with nail axis perpendicular to wood fibers; nail penetration, p, into the main member equal to 10D and nail bending yield strengths, F<sub>b</sub>, of 100,000 psi for 0.099" ≤ D ≤ 0.142", 90,000 psi for 0.142" < D ≤ 0.177", 80,000 psi for 0.177" < D ≤ 0.236", and 70,000 psi for 0.236" < D ≤ 0.273".  
 3. Where the nail or spike penetration, p, is less than 10D but not less than 6D, tabulated lateral design values, Z, shall be multiplied by p/10D or lateral design values shall be calculated using the provisions of 11.3 for the reduced penetration.  
 4. Nail length is insufficient to provide 10D penetration. Tabulated lateral design values, Z, shall be adjusted per footnote 3.  
 5. Tabulated lateral design values, Z, shall be permitted to apply for greater side member thickness when adjusted per footnote 3.

**Table 11R COMMON, BOX, or SINKER STEEL WIRE NAILS: Reference Lateral Design Values, Z, for Single Shear (two member) Connections<sup>1,2,3</sup>**

with wood structural panel side members with an effective  $G=0.42$   
(tabulated lateral design values are calculated based on an assumed nail penetration,  $p$ , into the main member equal to 10D)

1. Tabulated lateral design values, Z, shall be multiplied by all applicable adjustment factors (see Table 10.3.1).
2. Tabulated lateral design values, Z, are for common, box, or sinker steel wire nails (see Appendix Table L4) inserted in side grain with nail axis perpendicular to wood fibers; nail penetration,  $p$ , into the main member equal to 10D and nail bending yield strengths,  $F_{bn}$ , of 100,000 psi for  $0.099" \leq D \leq 0.142"$ , 90,000 psi for  $0.142" < D \leq 0.177"$ , 80,000 psi for  $0.177" < D \leq 0.236"$ , and 70,000 psi for  $0.236" < D \leq 0.273"$ .
3. Where the nail or spike penetration,  $p$ , is less than 10D but not less than 6D, tabulated lateral design values, Z, shall be multiplied by  $p/10D$  or lateral design values shall be calculated using the provisions of 11.3 for the reduced penetration.
4. Nail length is insufficient to provide 10D penetration. Tabulated lateral design values, Z, shall be adjusted per footnote 3.
5. Tabulated lateral design values, Z, shall be permitted to apply for greater side member thickness when adjusted per footnote 3.
